PROFESSIONAL SUMMARY

Unity Game Developer with 2.6 years of experience in Unity 3D (C#), scripting, optimisation, WebGL development, immersive interactive applications, and UX-focused interface design for Android, iOS, WebGL, and Windows platforms. Skilled in performance optimisation, lighting workflows, problem-solving, multiplayer systems, Firebase integration, and scalable architecture, with working knowledge of Unreal Engine and ongoing AR/VR learning and implementation exposure. Contributed to production titles with 5M+ downloads and delivered a 1900% export pipeline improvement through memory optimisation and coroutine-based systems. Immediate joiner.

TECHNICAL SKILLS

Game Engines: Unity 2D/3D (Advanced), Unreal Engine (Beginner — Blueprints, UI)

Languages: C# (Advanced), JavaScript, C++, C

Multiplayer: Photon PUN2, Photon Fusion, Socket.IO, Colyseus, RealTime Matchmaking, Room Systems, Leaderboards, Network Synchronisation

Backend & Database: Firebase (Auth, Realtime DB, Firestore, Push Notifications), Node.js, MongoDB, REST API, WebSocket

Performance: Object Pooling, GC Optimisation, Draw Call Reduction, Mobile Optimisation, Unity Profiler, Memory Management, Lighting Optimisation

Architecture: Clean Architecture, SOLID Principles, Component-Based Design, Design Patterns, Event-Driven Programming, Scalable Systems, Problem Solving

UI/UX: Unity UI, UX-Focused Interfaces, Dynamic Scaling, Localisation, Responsive Design, Figma

Platforms: Android, iOS, WebGL, Windows

Immersive Tech: AR/VR Fundamentals, Interactive Experiences

Tools: Git, GitHub, Visual Studio, Android Logcat, Figma, Unity Addressables, CI/CD (GitHub Actions)

PROFESSIONAL EXPERIENCE

Unity Game Developer

Deftsoft

Oct 2023 – Feb 2026

Mohali, Punjab

- Developed and shipped Unity 3D applications and multiplayer games across Android, iOS, WebGL, and Windows using Unity and C#, contributing to titles with **5M+ downloads** (Alnahsha Run).
- Integrated **Photon PUN2** and **Socket.IO** for real-time multiplayer matchmaking, friend systems, leaderboards, and room sharing with WhatsApp/social invite links while maintaining scalable scripting and optimisation workflows.
- Resolved 3D character export pipeline crash — scaled from **20 to 1,000+ exports in 5 minutes (1900% improvement)** via coroutine-based export queue, memory unloading, and performance optimisation techniques.
- Built reusable game systems, **object pooling**, enemy AI, shooting mechanics, UX-focused interfaces, and dynamic UI scaling across multiple screen resolutions for responsive user experiences.
- Integrated **Firebase** (Auth, Realtime DB, Push Notifications) and **Node.js** backends across multiple production titles for real-time data synchronisation.
- Created a reusable UI tool for a junior teammate — enabled delivery **1.5 days ahead of schedule**, boosting team efficiency by **12%**.
- Mentored junior developers on clean architecture and scalable Unity workflows; conducted technical sessions and contributed Figma wireframes.
- Ranked **1st** in Deftsoft internal Unity challenge for clean, scalable architecture and problem-solving.

KEY PROJECTS

Alnahsha Run — *Unity, C#, Android/iOS*

5M+ Downloads

- Endless runner across Riyadh, Dubai, Cairo. Improved UI/UX, built reusable city-themed UI scaling system, optimised for 60fps on low-end devices.

Multiplayer Card Game — *Unity, Photon, Socket.IO, Firebase, Android*

Production

- Poker-style real-time multiplayer with Firebase auth, matchmaking, friend manager, push notifications, and localised WhatsApp social invite system.

City Builder Resource Management — *Unity, Node.js, MongoDB, WebGL + Android*

Confidential

- Resource management game with object pooling for optimised performance; clean modular architecture with Node.js and MongoDB backend integration.

3D Character Creator Tool — *Unity, C#, Blendshapes, Windows*

Confidential

- Character design tool with facial morphing. Resolved export pipeline crash — improved from 20 to 1,000+ exports in 5 minutes (1900% faster).

Multiplayer Tank Battle — *Unity, C#, Photon Fusion, Android*

In Progress

- Fusion Host Mode multiplayer with client-side prediction, interest management, ScriptableObjects for modular tank configurations.

EDUCATION

Bachelor of Computer Applications (BCA)

Guru Nanak Dev University College

2020 – 2023

Amritsar
