PROFESSIONAL SUMMARY

Unity Game Developer with over 2.6 years of production experience developing Android, iOS, WebGL, and Windows games using Unity and C#. Specialized in multiplayer game development, scalable gameplay architecture, backend integration, mobile optimization, and production-ready gameplay systems. Experience contributing to live production titles with 5M+ downloads across casual, hyper-casual, and multiplayer games.

Strong expertise in Photon PUN2, Photon Fusion, Socket.IO, Colyseus, Firebase, Node.js, MongoDB, gameplay systems, clean architecture, object pooling, responsive UI systems, and real-time networking workflows. Experienced in feature ownership, live production support, reusable system design, multiplayer synchronization, performance optimization, and scalable maintainable code architecture.

Delivered a 1900% export pipeline optimization improving workflow scalability from 20 exports to 1000+ exports in 5 minutes. Immediate joiner.

TECHNICAL SKILLS

Game Engines: Unity 2D/3D (Advanced), Unreal Engine (Beginner), VR/XR Prototype Development

Programming Languages: C#, C++, C, JavaScript

Multiplayer & Networking: Photon PUN2, Photon Fusion, Socket.IO, Colyseus, Real-Time Multiplayer Systems, Match-making Systems, Lobby Systems, Room Management, Player Synchronization, RaiseEvent Synchronization, RPC Systems, Network Object Spawning, Authority Handling, Client Prediction Basics, Lag Compensation Basics, Network Optimization, Multiplayer UI Flows, Social Invite Systems

Backend & Live Services: Firebase Authentication, Firestore, Realtime Database, Push Notifications, Google Sign-In Basics, Node.js, Express.js, MongoDB, REST APIs, JSON Serialization, Cloud Save Systems, Backend Synchronization, Live-Service Connectivity

Gameplay Systems: Gameplay Architecture, Combat Systems, Health Systems, Resource Management Systems, Building Systems, Endless Runner Systems, Tilemap Systems, State-Driven Gameplay, Wave Systems, Save/Load Systems, Enemy AI Systems, FSM AI, Progression Systems, Mobile Gameplay Systems

Architecture & Design Patterns: Clean Architecture, Modular Architecture, Scalable Architecture, SOLID Principles, MVP Architecture, MVC Concepts, Singleton Pattern, State Machine Pattern, Factory Pattern, Strategy Pattern, Observer Pattern, Event-Driven Architecture, ScriptableObject-Driven Architecture, Object Pooling Systems, Reusable Gameplay Frameworks

Performance Optimization: Unity Profiler, Memory Optimization, Garbage Collection Optimization, Draw Call Reduction, FPS Optimization, Mobile Optimization, WebGL Optimization, Build Size Optimization, Runtime Optimization, Export Pipeline Optimization, Low-End Device Optimization, Texture Optimization, Sprite Atlas Optimization

Mobile Development: Android & iOS Deployment, APK/AAB Generation, Store Submission Process, App Signing, Touch Controls, Resolution Handling, Safe Area Handling, Battery Optimization, Cross-Platform Development Workflows

UI / UX: Unity UI, TextMeshPro, Responsive UI Scaling, Localization-Ready UI Systems, Adaptive Layout Systems, Dynamic UI Systems, HUD Systems, Menu Systems, UI Animation Polish, Cross-Device UI Support, Figma

Tools & SDKs: Git, GitHub, GitLab, Sourcetree, Visual Studio, Android Logcat, DOTween, Unity Addressables, Unity Ads Basics, AdMob Basics, IronSource Basics, AppLovin Basics, Analytics SDK Basics, CI/CD Basics, Jira, Trello, ClickUp

PROFESSIONAL EXPERIENCE

Unity Game Developer

Deftsoft

Oct 2023 – Feb 2026

Mohali, Punjab

- Developed and maintained multiplayer, casual, and hyper-casual games across Android, iOS, WebGL, and Windows platforms using Unity and C#, contributing to live production titles with **5M+ downloads**.
- Built real-time multiplayer gameplay systems using **Photon PUN2**, **Photon Fusion**, and **Socket.IO**, including match-making systems, room systems, player synchronization, leaderboard systems, friend systems, and multiplayer UI flows.
- Integrated backend systems using **Firebase**, **Node.js**, **Express.js**, and **MongoDB** for authentication, real-time gameplay synchronization, persistent progression systems, cloud saves, push notifications, and live-service connectivity.
- Optimized a production export pipeline from approximately **20 exports to 1000+ exports within 5 minutes**, achieving around **1900% performance improvement** through coroutine-based processing, memory optimization, and workflow restructuring.

- Developed scalable gameplay systems including object pooling, enemy AI systems, wave systems, gameplay state handling, responsive UI systems, resource systems, building systems, and reusable gameplay frameworks.
- Designed clean, maintainable, and modular architecture using SOLID principles, ScriptableObject workflows, event-driven systems, FSM-based gameplay architecture, reusable components, and scalable project structures.
- Implemented performance optimization techniques including garbage collection optimization, draw call reduction, memory optimization, runtime optimization, WebGL optimization, and low-end mobile device optimization using Unity Profiler.
- Created reusable UI tooling for internal team workflows, enabling a junior developer to complete delivery **1.5 days ahead of schedule** while improving overall team efficiency by **12%**.
- Collaborated with designers, artists, QA teams, and developers in agile production workflows, contributing to technical discussions, feature ownership, production maintenance, debugging, and live production support.
- Mentored junior developers on scalable Unity workflows, multiplayer systems, clean architecture practices, debugging strategies, and maintainable gameplay engineering.
- Ranked **1st** in Deftsoft internal Unity challenge and game-development quiz for clean architecture, gameplay engineering, and technical problem-solving.

KEY PROJECTS

Alnahsha Run | Unity, C#, Android/iOS

5M+ Downloads

- Endless runner game featuring scalable mobile gameplay systems across Riyadh, Dubai, and Cairo environments with optimized UI/UX and responsive UI scaling systems.
- Implemented mobile optimization, gameplay polish, lightweight architecture, dynamic UI systems, gameplay balancing, and low-end device optimization for stable 60 FPS gameplay.

Multiplayer Card Game | Unity, Photon, Socket.IO, Firebase

Production

- Developed poker-style real-time multiplayer gameplay with matchmaking systems, lobby systems, friend systems, push notifications, leaderboard systems, and multiplayer synchronization.
- Integrated Firebase authentication, WhatsApp social invite systems, localization-ready multiplayer UI flows, backend synchronization, and persistent online progression systems.

City Builder Resource Management | Unity, Node.js, MongoDB, WebGL + Android

Confidential

- Developed scalable resource management and building systems with clean modular gameplay architecture, reusable systems, and optimized gameplay synchronization.
- Integrated Node.js backend systems, MongoDB database workflows, object pooling systems, and production-ready gameplay maintenance systems.

3D Character Creator Tool | Unity, C#, Blendshapes, Windows

Confidential

- Built advanced character customization systems including facial morphing, blendshape customization, color customization, and export workflows.
- Resolved production export pipeline bottlenecks and improved export scalability from 20 exports to 1000+ exports within 5 minutes.

Multiplayer Tank Battle | Unity, Photon Fusion, Android

In Progress

- Developing Fusion Host Mode multiplayer gameplay with client-side prediction basics, dynamic player handling (1–4 players), network synchronization, and modular gameplay architecture.
- Implementing ScriptableObject-driven tank systems, FSM-based enemy AI, matchmaking systems, responsive multiplayer UI systems, and scalable gameplay engineering workflows.

EDUCATION

Bachelor of Computer Applications (BCA)

2020 – 2023

Guru Nanak Dev University

Amritsar

CORE TECHNOLOGIES

Unity Game Developer, Multiplayer Unity Developer, Unity 2D/3D, Photon PUN2, Photon Fusion, Socket.IO, Colyseus, Firebase, Node.js, MongoDB, Multiplayer Architecture, Real-Time Networking, Mobile Game Development, Hyper-Casual Games, Casual Games, Multiplayer Games, Gameplay Systems, ScriptableObjects, State Machines, Event-Driven Architecture, Object Pooling, Backend Integration, WebGL Optimization, Mobile Optimization, Production Stability, Cross-Platform Development, Android & iOS Deployment, Responsive UI Systems, Localization Systems, Production Game Development, Live Ops Support, Performance Optimization, Reusable Gameplay Systems, Clean Architecture, Scalable Architecture.
